APTARE®

Backup Challenges, Solutions, and Success Stories

Reporting efficiencies allow Trustmark National Bank to reallocate budget and staffing to more strategic projects

Manually updating a spreadsheet wasn't the most efficient way for administrators at Trustmark National Bank to keep track of the backup status of its systems. Recognizing change was in order, the bank rolled out APTARE Backup Manager to streamline its backup reporting process and provide a Web-based, real-time view of its data protection environment. The resulting efficiencies cut the hours spent on backup reporting from 40 hours per month to four hours per month and enabled the move to a tapeless backup system. Subsequent savings in terms of time and hardware expenses are anticipated to total nearly $80,000 per year.

Personalized Customer Service Reliant on Data Availability

Recognizing that customer service is a key differentiator from other large regional banks, Trustmark National Bank strives to maintain that small-town atmosphere in its community branches, providing its clients with hands-on, personalized customer service. When a small business owner, soccer mom, or sales executive walks into their local bank branch, they need to be greeted with a smile, a friendly face, and intimate knowledge of the appropriate financial services best suited to their unique situation. However, as Trustmark continues to grow throughout the Southeast U.S. where it already has branches in Mississippi, Florida, Tennessee, and Texas, achieving that personalized service gets more difficult to scale.

The key, according to Chris Davidson, vice president and manager of open systems administration for Trustmark National Bank, is ensuring that tellers, bank managers, and financial advisors have reliable access to the tools and information they need to provide powerful yet personalized customer service, and, as the manager in charge of the bank's data protection strategy, that empowerment begins and ends with his team.

Prior to Davidson taking the helm, Trustmark's backup and recovery strategy was a decentralized, inefficient, and largely manual process. The bank's backup solution—IBM Tivoli Storage Manager (TSM)—didn't have an intuitive reporting mechanism, so the bank's backup administrators would take the raw data produced by TSM and manually populate spreadsheets that kept track of the organization's hundreds of systems and their backup status. This could be a viable strategy with a handful of servers, but as Trustmark continued to grow its infrastructure, the manual labor became a greater liability, and it became

Customer:
Trustmark National Bank
Website: www.trustmark.com
Industry: Banking
Headquarters: Jackson, Miss.
Employees: 2,500

APTARE Solution:
APTARE StorageConsole Backup Manager

Technology Environment
Storage: EMC

Backup Solution: IBM Tivoli Storage Manager and Quest vRanger Pro

De-Duplication Solution: Data Domain

Amount of Data Backed Up:
6-8 TB per night

"Our manual reporting system was too time consuming and inefficient. APTARE streamlines the process and allows us to focus our attention on other more strategic issues."
